Career objective

Innovative Software Engineer specializing in backend architecture, database optimization, and scalable web deployments. Experienced in transitioning legacy systems and architecting secure, full-stack applications using React, Node.js, Python, and AWS. Brings a strong academic foundation in machine learning and computer vision, aiming to build robust, intelligent software solutions.

Education

Bachelor of Computers and Information Technology

El Shorouk Academy

June 2024

El Shorouk City, Cairo, Egypt

- **Major:** Computer Science
 - **GPA:** Very good
-

Experience

Fullstack Engineer

Queen Service

Nov 2025 – Present

Cairo, Egypt

- Analyzed the legacy HR system to identify limitations and collaborated with the team to develop the backend for the updated application.
 - Restructured and improved the database schema, fixing structural issues to organize the data better and speed up query performance.
 - Handled data cleaning tasks and successfully migrated the company's database from Microsoft SQL Server to Oracle Database without data loss.
-

Projects

DMS - Diagram Management System - Secure Engineering Archive | 2026 - Present

- **Tools & Technologies:** Node.js, Express, Prisma, PostgreSQL, Redis, BullMQ, React, TypeScript, Docker
 - * Architected a secure full-stack application (React SPA & Node.js REST API) to manage the lifecycle, distribution, and archiving of engineering diagrams across multiple departments.
 - * Implemented asynchronous background worker queues using BullMQ and Redis for format-agnostic file processing (PDF, DWG) and automated system backups.
 - * Configured a fully on-premises, containerized deployment using Docker and NGINX, complete with automated data replication to secondary servers for disaster recovery.

SympAI - Healthcare Chatbot | 2024 | [GitHub Repository](#)

- **Tools & Technologies:** Next.js, Python, FastAPI, AWS (Amplify, ECS, DynamoDB)
 - * Designed and implemented a loosely coupled architecture to ensure scalability and maintainability across services.
 - * Deployed the Webserver on AWS Amplify, using Next.js to create a responsive chatbot interface for real-time user interactions.
 - * Developed and deployed the main API on AWS ECS using FastAPI to handle chatbot requests and ensure fast communication between services.

Drive Wise - Graduation Project | 2024 | [GitHub Repository](#)

- **Tools & Technologies:** Python, Django, Flask, Tensorflow, Scikit-learn, OpenCV, YoloExcellent.
- **Grade:** Excellent.

- * Designed and implemented a model for driver drowsiness detection.
- * Designed and deployed a RESTful API using Flask Framework.
- * Implemented a real-time Violation Detection and logging using Firebase Real-time Database.
- * Design and implemented a dashboard using Django.

Rental Contracts Expert System | 2024 | [GitHub Repository](#)

- **Tools & Technologies:** CLIPS
 - * Developed an expert system to assist civilians in creating rental contracts that comply with Egyptian legal requirements.
 - * Implemented using CLIPS for rule-based reasoning and knowledge representation.

Egyptian Currency Recognition | 2023 | [Deployment Link](#)

- **Tools & Technologies:** OpenCV, DataGradients, YOLO, Roboflow
 - * Created a system to help visually impaired individuals recognize banknote denominations.
 - * Employed YOLO detection model and OpenCV for image processing and recognition tasks.

Pharmacy Management System | 2022 | [GitHub Repository](#)

- **Tools & Technologies:** C#, Microsoft SQL Server
 - * Designed and implemented a database and a desktop application dashboard using C Sharp and Microsoft SQL Server.
 - * Designed and implemented an a sql query builder.

Meow Player | 2021 | [GitHub Repository](#)

- **Tools & Technologies:** C Sharp, Microsoft SQL Server
 - * Created an audio player desktop application with an innovative UI using C Sharp.
 - * Designed and implemented a file system for saving and retrieving playlists.

Courses

- **AWS Machine Learning Trainee – Digital Egypt Pioneers Initiative (DEPI) – (160 hours)**
- **Advanced Learning Algorithms – Coursera – (34 hours)**
 Issued: October, 2023
 Credential ID: PTJSVDED9N9T
- **Supervised Machine Learning: Regression and Classification– Coursera – (33 hours)**
 Issued: July, 2023
 Credential ID: SFDAQ837LL2H

Skills

Technical Skills

Programming Languages

Experienced: Python, C#, Java

Intermediate: Java, Flutter

Familiar: C++, CSS, JavaScript, Bootstrap, PHP

ML Frameworks: TensorFlow, Keras, Scikit-Learn

Data Analysis: Pandas, NumPy, Matplotlib, Seaborn

Databases: MySQL, Postgress, Oracle, Firebase, DynamoDB

Development Tools: Git, Docker, Jupyter Notebooks

Other: Prompt Engineering, OpenCV

Languages

English: Professional working proficiency
